

Realize the
Rewards
of Comfortable Living

Your Home

Building your own home means the opportunity to invest in the features that truly matter to you and your family. Starting at the beginning means choosing the floor plan that will best suit your needs and creating a design that achieves a home reflecting your unique personality and lifestyle.

It is in the walls of your house that a story is told, and here at Reward Wall Systems we want to help you create a home that will be a solid part of your future. Reward's Insulating Concrete Forms (ICFs) provide the strength, savings and safety that you want most.

Benefits of ICFs

Strength and Safety

Proven to withstand fire for up to four hours, winds up to 200 mph and seismic activity, Reward walls protect your family and your belongings from the elements, no matter the magnitude.

Energy Savings

Insulating foam and a concrete core keeps heat in during the winter and out in the summer. By ensuring even temperatures year round your energy costs will drop, often saving between 50 and 80% on your bills.

Design Flexibility

Reward ICFs carry the versatility to fit any home plan you can imagine. They allow the flexibility to achieve curved walls, archways and an array of interior and exterior finishes, all while incorporating the strength of concrete.

Healthy Living

A Reward built home is a safe haven from irritants that can aggravate your allergies and your health. Mold, mildew and dust particles are blocked, creating a clean environment for your family to enjoy. The thick concrete walls also block out exterior noises to create a peaceful retreat.

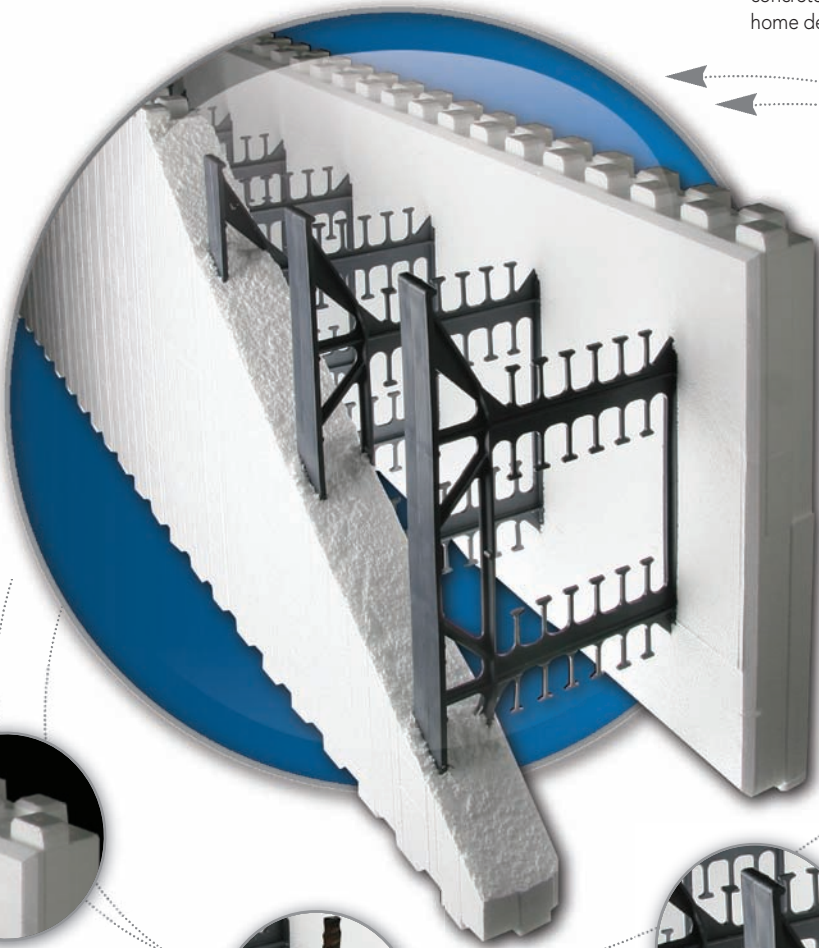

Environmental Impact

Reduced energy usage is just the beginning of ICFs' benefits. By reducing the amount of wood used in construction, forests are protected and allowed to thrive. Sophisticated design allows for minimal waste in the field, and what remains of the form can be recycled.

ICF Defined

Two pieces of foam are connected by strong plastic ties to make a 16" tall form. The forms are stacked and then filled with concrete. The forms remain in place and provide several inches of insulation.

Versatile

Reward's extensive product line allows a choice of concrete wall thickness and the flexibility to have the home design you desire.

Straightforward

1-1/4" furring strips, recessed 1/2" and 6" on center allow for easy attachment of drywall and exterior finishes. Exterior foam provides easy placement of electrical wiring and plumbing.

Solid

Achieving a straight and square insulated steel-reinforced structural wall is easy with Reward's patented designs.

Strong

8 full length ties placed 6" on center plus several inches of foam on each side provide unmatched strength during concrete pours.

Easy

Reversible forms with no top or bottom, no right or wrong side and no left or right corner make stacking easy with Reward ICFs.

Fast

It's a snap to place horizontal rebar. With the loose fit 2-deep design, there's no need to tie the rebar.

ICF Installation

Blocks are stacked in courses on top of a concrete footing, leaving openings for windows and doors. Steel rebar is placed into the forms for additional reinforcement. These openings are braced along with the rest of the walls to prepare for the pouring of concrete.

Prior to concrete placement, the builder will make preparations for floors, utilities, vents, etc. Concrete is poured into the properly braced forms to create solid concrete walls.

Utilities are easily installed by cutting a channel into the foam and inserting the electrical or plumbing components. Fastening strips, recessed into the foam, are clearly marked on the exterior by raised lines. These strips provide a continuous point for attachment from floor to ceiling allowing any type of interior or exterior finish to be applied directly to the form.

Working With Reward

Starting With A Plan

If you are just beginning the process of building your own home, request a free copy of Reward's Home Plan CD. With dozens of ICF compatible home plans, you'll find just the style you're looking for based on number of bedrooms, layout or square footage.

Builder Support

At Reward Wall Systems, we go *Beyond the Block* to bring your builder the tools they need to construct your home. Our engineering and product application team are here to provide support over the phone or on site when a question arises.

With an extensive product manual and code compliance documentation, contractors and sub contractors can build upon Reward's foundation of knowledge and experience.

Getting Started

Ask your builder about the benefits of building with Reward or contact us to find a builder in your area.
